- Made of electro-galvanized press-bent and electro-welded sheet steel on both sides of thickness 8/10 mm for the outer casing up to 20/10 mm for the internal assembly parts such as reinforcements and uprights.
- The ground support structure is available in two versions, with a closed base or plinth with a height of 150mm., Built in electro galvanized steel sheet; or with base raised from the ground in 40mm square extruded aluminum profile.
- Painting Performed with an electrostatic epoxy-polyester powder system preceded by a protective antioxidant treatment with zinc phosphates.
- Worktops - post-forming plastic laminate with integrated upstand, supported by water-repellent chipboard 30 mm thick type E1;
- Sinks They can be in porcelain integrated flush with the surface, in square and circular stainless steel above the top or integrated flush with the surface, in circular steel above the top with white vitrification treatment.
- Handles in aluminum profile, in stainless steel.
